

INNOMATRIX SERVICES IDMATRIX2

The Adaptive IDM solution

ABOUT IDMATRIX

IdMatrix is a scalable and flexibly customizable solution that enables identity management through the use of individual workflows and business roles combined with unique functions, while making rights management more efficient and secure. IdMatrix supports the management of access rights by integrating these into the user life cycle, and its built-in functions guarantee compliance -proof operation.

FLEXIBILITY IN FOCUS

Customizability and flexibility has always been the focus from the start of the design of our IdMatrix solution, along with ensuring a smooth user experience. All of these requirements greatly influenced the technologies that were used during its development and the invention of the system's internal architecture. This development resulted in the creation of a modular structure which can be customized by parameterization and is also able to completely fulfill all business and technology needs and requirements.

IDMATRIX IN NUMBERS

More than 100,000
users managed

More than 50 million
transactions completed
